De Corpore & eius speciebus

cap: XI.

Corpus ē longitudo, latitudine & profunditate. Si linea superficies in profundum fluere intelligatur, corpus cōbit. quod lineis rectis sese orthogonaliter in uno puncto secantib: dimetiri aiunt: In longū rectas latum & profundum, Et harum linearum extremitates, distantia positionis notant: his designandis Vocabulis, sursum, deorsum, ante, retro, dextrorsum, & sinistrorsum. Vt si lancea una p verticē hui: capitis infigeret, et p aures exiret, metiret longitudinem, & alia perfodiens pectus, & dorso exiens, metiret profunditate. & rectus intrans p latus utrumq: indicat latitudine.

Est aut in bipartita diuisione, alterum ē Regulare alterum Irregulare. Regulare, quod ne unius, mutatem in angulis & lateribus: Per oppositum definio Irregulare. Regulare diuidit bifariam, In Agon siue Sphæricum & Conicum. Corpus Sphæricum siue Sphæra ē corpus rotundum, unica superficie coercitum, in q medio punctu ē, á q ōes lineæ ductæ ad superf: utrinque sunt æquales. De his latius vide in Astrono: Corpus Conicum, q ne angulos. Et ē quinque Q. tetraedron, hexaedro, octoedron, duodecedron, & icocedron.
